

**NEW!**

# Lipex<sup>®</sup> Bassol range

- Natural renewable liquid base emollients.
- High oxidation stability.
- Safe use for cosmetics and personal care applications.

The current strong trend for more natural and environmentally friendly cosmetic formulations, driven by pressure from consumers, certifying bodies and government targets, has placed high demands on new natural derived ingredients.

## Lipex<sup>®</sup> Bassol range

The Lipex<sup>®</sup> Bassol range includes two cost efficient and renewable liquid emollients that are offered as alternatives to synthetic esters, petroleum derived oils and also as alternatives to less stable vegetable oils. Lipex<sup>®</sup> Bassol and Lipex<sup>®</sup> Bassol C are composed of optimised blends of 100% purified vegetable oils that are characterised by high oxidative stability (Figure) and mildness, aspects that are of vital importance for skin and body care applications. Thanks to the clear liquid appearance of Lipex<sup>®</sup> Bassol C at low temperatures it is additionally well-suited for clear liquid applications such as body and baby oils. It also shows good functionality in low viscous emulsions and is well suitable for cold processing.

Figure 1

Lipex<sup>®</sup> Bassol and Lipex<sup>®</sup> Bassol C are more stable than traditional vegetable emollients
